Tolls, Tariff & Procedures Committee**

**RESOLUTION
Storage Procedure Review**

Resolution T2003-01

The Tolls, Tariff & Procedures Committee (“TTP”) agrees to adopt the Connection of Storage Facilities Procedure ("Storage Procedure") as amended. The TTP also agrees to adopt the amendment to the Guidelines for New Facilities.

Background

The Storage Procedure was originally developed and adopted by the TTP in 1997 (Resolution T97-05). Since the adoption of that Storage Procedure changes were made to the Tariff, making it necessary for a review of the procedure. Additionally there was a commitment to review the Storage Procedure in Resolution T97-05 that stated:

"These provisions will be re-evaluated and set no precedent in the event that the tolling methodology on NGTL is modified from the current postage stamp."

The TTP Storage Procedure Task Force (“Task Force”) conducted this review and recommended changes to the Storage Procedure that align with the provisions in the Tariff. In addition, the Task Force recommended that a reference be added to the Guidelines for New Facilities pointing to the Storage Procedure for the criteria for evaluation of new storage facility requests.

Next Steps

TransCanada will file the approved resolution with the Alberta Energy and Utilities Board (“EUB”). TransCanada will notify Customers of the amended Storage Procedure and post it on the company web site.

This Storage Procedure, as with all NGTL procedures, are subject to review at any time. This procedure sets no precedent and will be re-evaluated once the EUB issues its decision on Intra-Alberta Accountability.
