

CHAPTER 4 – DESIGN FLOWS

4.1 Introduction

This chapter is intended to provide an overview of the design flows and peak expected flows (as described in Section 2.6) that result in the need for mainline facilities. However, for this Annual Plan no new mainline facilities are being proposed for the Alberta System based on the June 2009 design forecast, and therefore, no design flow charts or tables are shown in this Chapter or in Appendix 2.
